DETAILED ACTION

Form PTO-1449 Information disclosure statement was received February 15, 2002 as Paper#3, however, references were not attached to the IDS statement therefore were not reviewed by Examiner.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Ewing (5236749).

Ewing discloses a blister pack comprising an embossed blister formed from a laminated film (col. 1 lines 59-68, col. 2 lines 1-4).

Process limitations are given little or no patentable weight. The method of forming the product is not germane to the issue of patentability of the product itself. Further, when the prior art discloses a product which reasonably appears to be either identical with or only slightly different than a product claim in a product-by-process claim, the burden is on the Applicant to present evidence from which the Examiner could reasonably conclude that the claimed product differs in kind from those of the prior art. *In re Brown*, 459 F.2d 531, 173 USPQ 685 (CCPA 1972); *In re Fessman*, 489 F.2d 742, 180 USPQ 324 (CCPA 1974). This burden is NOT discharged solely

Art Unit: 1772

because the product was derived from a process not known to the prior art. *In re Fessman*, 489 F.2d 742, 180 USPQ 324 (CCPA 1974).

Furthermore, the determination of patentability for a product-by-process claim is based on the product itself and not on the method of production. If the product in the product-by-process claim is the same or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process. *In re Thorpe*, 227 USPQ 946, 966 (Fed. Cir. 1985) and MPEP §2113. In this case, the limitation of forming a blister by advancing a pin having a face with an indicia thereon in transversal direction relative to the film plane towards and into engagement with a platen bearing an indicia forming die thereon and located on the opposite side of the film wherein the advancing movement of the pin controllably stretches the film around the blister in a manner minimizing stretching of the film located at the base of the blister is a method of production and therefore does not determine the patentability of the product itself.
